

Project XTC – Development Edition 0.1

Chapter 3 – Banks and Channels

Eight Physical Channels

The X-Touch always has eight physical channel strips. They never become Track 1, Track 2 or Track 3 permanently. Instead, they display whichever eight Bitwig tracks are currently in view.

The Moving Window

Think of the surface as an eight-track window into your project. Pressing BANK moves the window eight tracks at a time. Pressing CHANNEL shifts the window one track at a time. The hardware never changes; only the visible section of the project changes.

BANK and CHANNEL

BANK is for rapid movement through large projects. CHANNEL is for fine adjustment once you are close to the area you want to work in.

Field Note #005

If the faders jump after banking, that's expected. Bitwig has instructed the X-Touch to represent a different group of tracks.

Key Takeaways

- Eight physical channels can represent unlimited tracks.
- BANK moves by eight; CHANNEL moves by one.
- Always think in terms of an eight-track window.
